Our auction venue

The Chartered Institute of Public Finance and Accountancy is one of the oldest professional accounting bodies. The institute has its origins in local government and was founded in 1885. Its members are principally financial officials in local and public authorities. CIPFA has occupied the Adam House at 3 Robert Street since 1985 and has carried out an extensive programme of restoration. A. H. Baldwin and Sons Ltd. occupied various rooms in the house from around 1920 until 1963, with the Ballroom, now the Council Chamber, as the main coin room.

Our logo

A. H. Baldwin and Sons Ltd., founded in 1872, has had premises in The Adelphi since the 1920's and since 1970 at 11 Adelphi Terrace. The original terrace was demolished in 1936. The drawing is derived from part of Robert Adam's original plans for his Royal Terrace, and depicts the house at the West end of the Terrace at the corner of Robert Street.

THE PHILIP D GREENALL COLLECTION

Part II

The collection of English, Scottish and Irish coins formed by Philip Greenall and his wife, Stella, is a general one assembled to represent the series as a whole. It contains several coins of Oxford, a city of which Philip was fond. An area of particular interest, one which afforded great pleasure to them, was the acquisition and study of coins of the Tudors. This is reflected by the range of denominations, types and mintmarks here offered. The Tower, provincial and siege issues of Charles I are also quite well represented, although it should be mentioned that some pieces were bequeathed to the British Museum together with the collection of Venetian coins.

A GROUP OF DIES

The first three are designed for striking Western European coin types of the late medieval to early modern periods by the hammer technique. All are trussels, i.e. the upper die, their tops spread by hammering. The metal from which they are made is iron; whether, as is probable, they have steel caps cannot be determined by superficial inspection and the determination of that would require metallurgical investigation. There is a considerable literature on surviving early dies: for a well referenced and recent discussion of dies of similar type see Marion M. Archibald, Janet S. Lang and Gustav Milne, 'Four Early Medieval Coin Dies from the London Waterfront' NC 155 (1995), 163-200 and pls 30-7. In describing the designs on the dies, left and right refers to the perceived position of features as they would be seen on coins struck from the dies.

- *2084** Bohemia, an iron coin die for Bracteates, Premysl II 1253-1278, 105 mm long, 14mm diameter at the face, the section above the face faceted square expanding to approximately 25mm, with the crowned Bohemian lion rampant facing left, double tail entwined, within a thick, solid outer circle. *The top spread from hammering, surface blackened, design very fine and clear.* £1800-2000

Bracteates of similar design attributed to the Bohemian king Premysl II (1253-78) are well known (Cach 954; Donebauer 805). A note in the Donebauer catalogue says that many coins of the type were found in the Kyselowitz hoard.

- *2085** South Germany, 15th century, perhaps Sigismund I, (King 1410-1433, Emperor 1433-1437), iron coin die, 116 mm long, 15 mm diameter at the face, the section above the face circular progressively expanding to 23 mm, with a crowned and draped bust facing right, S to left, gothic R to right; maker's mark (a cross-pommee) countermarked in shank. *Top of die spread from hammering, surface corroded but design clear and generally fine.* £900-1000

The style is consistent with coins struck in Southern Germany in the 15th century. The portrait could represent Sigismund I; a number of new royal and imperial mints were established during the reign including one at Basel in 1429.

- *2086** Brandenburg, late 16th century (?), an iron coin die, 75 mm long, 14 mm diameter at the face, the section above the face faceted square expanding to approximately 24 mm, with an orb with a large cross above ('reichsapfel'), surrounded by arabesques. *Piece broken off at the top of the die, spread from hammering, surface blackened, the design very fine and clear.* £900-1000

This is typical of the reverse of a Brandenburg groschen of the late 16 century, although the type is a common one that could have been used in other German states around the same date or even later. A very similar reverse, although with a date incorporated in the design, can be seen in Saurma-Jeltsch, ill. 2527.

- *2087** India, Mughal Empire, Shah Jihan 1628-1657, a bronze die for the reverse of a square-field Muhr or Rupee, the Shah Jihan legend quite clear in central square, the marginal legends including mint name less clear (cf Hull p 607,2). *Some stable corrosion damage at edges, about very fine, rare.* £300-350

Perhaps a die for the regular coinage, this might also be a forger's die.

- *2088** Great Britain, Anne 1702-1714, a die for the reverse of a Shilling of 1707 after Union, *rev* nothing in angles (cf S 3608 ff), the square face truncated at corners, uncertain mark (in the form of a fraction, I/D ?) impressed in side surface, central recess on back for fixing (for the coin, cf S 3608ff). *The head flattened from hammering, a clear engraving, very fine.* £200-250

Some loss of detail, especially around radial lines of the central Star of the Garter, and perhaps a forger's die.

- *2089** Great Britain, George III (1760-1820), a matrix for making obverse dies for Fifth Head "Spade" Guineas 1787-1799, the shallow raised design on a base with many-faceted edge, the back with raised cross of metal for fixing (for the coin, cf S 3729). *Two cracks in surface, very fine.* £240-280

Probably a forger's matrix, abandoned when cracked.
